Staten Island, NY

AKF GROUP & IN POSSE SELECTED TO PROVIDE ENGINEERING SERVICES FOR NET ZERO ENERGY SCHOOL ON STATEN ISLAND

AKF is proud to announce that we have been retained as Engineer and sustainable services consultant for the New York City Department of Education's first "Net Zero Energy" school building to be built in the Woodrow neighborhood in Staten Island's Community District 3. The City's goal of being an environmental leader continues to be demonstrated with their commitment to being one of the first communities to build the most environmentally friendly school buildings in the world. AKF will provide Mechanical and Electrical Engineering services and through our subsidiary Sustainable Services company In Posse, will provide technical expertise related to the net zero energy aspects of the project.

The project, slated to open in 2014 as a 70,000 square foot, 444-seat elementary school, will be one of the few buildings anywhere to generate as much energy as it uses.
